## Net-Zero Emissions Commitment

Date: 16-07-2022

To whom it may concern,

We, the President of the University, hereby declare the commitment of the University of Oum El-Bouaghi, Algeria, to achieving net-zero emissions. As an institution dedicated to promoting environmental sustainability and addressing the urgent challenges of climate change, we have set the year 2035 as our target for reaching net-zero emissions.

This commitment represents a milestone in our ongoing efforts to mitigate greenhouse gas emissions and contribute to a sustainable future. By striving for net-zero emissions, we aim to balance our carbon footprint by reducing emissions to the greatest extent possible and offsetting any remaining emissions through the use of carbon capture technologies, renewable energy projects, or other carbon offset mechanisms.

At the University of Oum El-Bouaghi, we recognize the critical role that educational institutions can play in shaping a sustainable society. By taking this proactive step towards achieving net-zero emissions, we seek to inspire our students, faculty, staff, and the wider community to embrace sustainable practices and join us in the fight against climate change.

We are committed to transparently tracking our progress towards this net-zero goal and regularly reporting on our emissions reduction initiatives, renewable energy investments, and other sustainability measures. By doing so, we aim to be accountable to our stakeholders and actively contribute to the global efforts to limit global warming and create a more sustainable, greener and healthier planet for future generations.

Thank you for your continued support as we work towards a net-zero future. We are determined in our mission to bring about change for the betterment of our planet, and together, we can make a difference and create a promising future for generations to come.

The University President

Pr. Zohir DIBI
