

PREAMBLE

The First National seminar on Medicinal Plants Biotechnologies, and their Implications in the Pharmaceutical and Food Industries, organized by the Laboratory of Natural Substances, Biomolecules and Biotechnological Applications, aims to make an inventory on the valorization of natural substances in the development of national industry and, particularly the pharmaceutical and food industries.

This scientific event will be an interface for scientific exchange between researchers and industrialists. It will also contribute to the exploitation of convincing results through their application on an industrial scale and the creation of startups. In addition, this seminar will provide an update on natural herbal treatment against various diseases such as Alzheimer's, cancer and diabetes, with a focus on finding preventive solutions as an alternative to chemotherapy.

The aim of the meeting is to establish a network and to set up a platform of scientific expertise between academics, researchers, research centers and industrialists on the biotechnologies of natural substances, while strengthening relations between researchers in order to develop and enhance the results of scientific research in various fields such as agriculture, food, health and pharmacy.

1st NATIONAL SEMINAR

Biotechnology of Medicinal Plants and their Involvement in the Pharmaceutical and Food Industries.

DECEMBER 13th & 14th, 2021

THEMES

- 1 Innovative methods of extraction, analysis and evaluation of bioactive molecules.
- 2 Natural substances and cellular intoxications.
- 3 Biotechnology and biodiversity of bioactive molecules.
- 4 Valorization and applications of natural substances.
