**Answer n°01 :**

Air pollution	Water pollution	Soil pollution	Noise pollution
1-5	2-6	4-7	3-8

**Answer n°02 :**

Waste management is very important for protecting the environment and human health. It helps reduce pollution air, water and soil. Proper waste management also allows recycling and reuse of materials, which saves naturel resources and energy. In addition, it keeps our cities clean and prevents the spread of diseases. Therefore, everyone should participate in managing waste responsibly.

**Answer n°03:**

1. Definition of the topic.
2. Updating sources (Bibliographie).
3. Critical analysis (context, author, content).
4. Synthesis (answering a research problem).

**Answer n°04:**

Synonyms:

1. Waste= rubbish: materials that are no longer useful and must be disposed.
2. Reuse= Reutilization: using something again instead of throwing it away.
3. Dangerous waste = Hazardous waste: waste that is harmful to human health or the environment.
4. Incineration = Burring: the process of burring waste at high temperature to reduce its volume
