

Preamble

The food industry is one of the most important sectors of the Algerian economy. Recently, the food industry has known various innovations in this field, which relies mainly on natural raw materials in order to preserve the health of the citizen in the first place. The by-products of food industries that are produced during the preparation and transformation of the main product (such as: whey, seeds, pulp, husks...) are known as being rich in nutrients such as fiber, vitamins, enzymes and dyes, which contain many health benefits, and a source of income for industries. and increase economic productivity. This scientific event aims to contribute to the development of food products, including by-products from the agricultural food industry, and investing them in the field of food (human or animal), health, and even cosmetics. It also aims to gather knowledge and good scientific practices about the creative ways of these resources, and to create a platform for scientific expertise between universities, researchers, research centers, the agro-food industry and the industrial sector. The seminar program includes scientific conferences, oral presentations, posters and innovative creative workshops to promote by-products of the innovative food industry.

1ST NATIONAL SEMINAR IN PRESENTIAL By-products of the Agri-Food Industry: Valorization and Innovation -SPIAVI-

30 & 31 th October 2023
